Adriana - I apologize for not getting back to you earlier. I totally forgot about your email and I only came across it today because I was looking for some other email. It sounds like you have a copy of our Rodenticide Risk Mitigation Decision from May 2008. I don't know if you have looked at the public docket associated with the Decision - it will have copies of all the public comments, Risk Assessments, letters from registrants, etc that were part of the decision making. The link for the docket is:

<http://www.regulations.gov/search/Regs/home.html#docketDetail?R=EPA-HQ-OPP-2006-0955>

The major mitigation measures from our decision are:

1. Only allows second generation anticoagulants to be sold to professional applicators (NOT to homeowners). This is accomplished with packaging size restrictions;
2. All rodenticides sold to consumers ("over the counter") must be packaged in ready to use bait stations.
3. Pelleted formulations will not be allowed.

I will speak to one of the efficacy reviewers I work with and I will send you information on the field testing. Please let me know if you have other questions.

Regards,  
John Hebert

Dear Hebert

I'm resending you this mail from another email, because ANMAT server is bad

Dear Hebert

I'm contacting you by Dan Myers, he brought me your email so as I could ask you some questions. Of course my English is very bad but I hope you

can understand me.

We are needing information about rodenticide's products registration. We know the Decision of EPA from the last year.

Here in ANMAT (National Administration of Drugs, Food and Medical Technology), we have decided to prohibit the use of grains and pellets for free sell, based on accidental exposures to thousands of children each year informed by several Toxicologist Centres of this country and taking into account EPA antecedents.

Of course some companies who manufacture this kind of products disagree with this decision and they are asking for the revocation of the act.

I'm sending you our Disposition but it's in Spanish, I hope you be able to read it!!

If You can send us any tools you consider important so as we can respond effectively the companies requirement.

Another way we would like to know which is the protocol that EPA recommend to use for the efficacy field evaluation of biolarvicides in general, used in Public Health for control vector diseases.

Thanking for everything you can send me!!!

Sincerely

Lic Adriana Husni
